

Transformer Cabinet Mural Project 2015

Artist: Stan Scott

Location: 3602 Manhattan

The transformer is based on an engine schematic and photographic/somewhat imagined reference. Carburetors, pistons, valves and spark plugs are all elements of the design that will play with the implied space and also be elements of pattern on the box. The drawings indicate active space/contrast rule but in the real life painting there will be more opportunities to further heighten These contrasts in the real scaled-up version.
