Gasland

The largest domestic natural gas drilling boom in history has swept across the United States. The Halliburton-developed drilling technology of “fracking” or hydraulic fracturing has unlocked a “Saudi Arabia of natural gas” just beneath us. But is fracking safe? When filmmaker Josh Fox is asked to lease his land for drilling, he embarks on a cross-country odyssey uncovering a trail of secrets, lies and contamination. He showcases an area in Pennsylvania where residents are able to light their drinking water on fire. This is just one of the many absurd and astonishing revelations of a new country called Gasland. Part verite travelogue, part expose, part mystery, part bluegrass banjo meltdown, part showdown.”

Cuba: The Power of Community

“The Power of Community - How Cuba Survived Peak Oil” was inspired when Faith Morgan and Pat Murphy took a trip to Cuba through Global Exchange in August, 2003. That year Pat had begun studying and speaking about worldwide peak oil production. In May Pat and Faith attended the second meeting of The Association for the Study of Peak Oil and Gas, a European group of oil geologists and scientists, which predicted that mankind was perilously close to having used up half of the world’s oil resources. When they learned that Cuba underwent the loss of over half of its oil imports and survived, after the fall of the Soviet Union in 1990, the couple wanted to see for themselves how Cuba had done this.

Vanishing of the Bees

This documentary takes a piercing investigative look at the economic, political, and ecological implications of the worldwide disappearance of the honeybee. The film examines our current agricultural landscape and celebrates the ancient and sacred connection between man and the honeybee. The story highlights the positive changes that have resulted due to the tragic phenomenon known as “Colony Collapse Disorder.”

Growth Busters

This documentary flips our world upside down to see what makes it tick, as it explores the most critical question of our time: How do we become a sustainable civilization? Water shortages, hunger, peak oil, species extinction, and even increasing depression are all symptoms of a deeper problem – addiction to unending growth in a world that has limits. “GrowthBusters: Hooked on Growth” goes way beyond prescribing Band-Aids to slow the bleeding. This film examines the cultural barriers that prevent us from reacting rationally to the evidence that current levels of population and consumption are unsustainable.
April 18 | 7 -9 PM | CSU - Behavior Sciences 131

** The producer will be attending the screening to answer questions.

Printed on recycled and recyclable paper.

Films are available to borrow for a two week period but staff must register through Talent and Reward and contact russo@fcgov.com.
