

Notice to Property **Owners and Developers**

If you own undeveloped property, or plan to redevelop your property adjacent to one of the streets scheduled for the 2010 Street Overlay and Sealcoat Project, please contact Kathleen Maddux at the City of Fort Collins Streets immediately at 970-221-6615. In 1999, a new fee was implemented for street cuts, and street cut fees on streets less than five years old are triple the base fee amount. In order to avoid these fees, work in the street should be

coordinated with this project.

Management Program Overlay and Sealcoat Program is largely funded by the 1/4 cent **Building Community Choices**

The Pavement

Sales Tax approved by voters in 1997. The tax was recently extended through 2015.

Sequence of 2010 Construction

In order to properly control traffic and maintain a safe work zone, construction is performed in phases. A variety of repairs, contractors and time frames are involved for each phase of the Street Overlay and Sealcoat Project, because each street is unique. The sequencing of repairs is shown below:

- Concrete May to September
- Mill and Pave May to October
- Overlay May to Oct

Repairs Planned for Your Street

Only residents/owners affected by these repairs receive this newsletter.

The first part of the 2010 Street Overlay and Sealcoat Project, the crack filling, has been completed on street. The next phase, vour repairing damaged curb and gutter to address serious drainage problems, will begin in May. The general contractor for these repairs will be Vogel Concrete.

Although City Code states that owners adjacent property are responsible for the repair of concrete curb, gutter and sidewalk, the City may participate through the Street Overlay and Sealcoat Project.

The project repairs damaged curb and gutter only if it is causing a serious drainage problem. This is to prevent water from seeping under the pavement and weakening the gravel base and soil beneath the street. The concrete that will be repaired by the Overlay Project, entirely at the City's expense, has already been marked on the street in bright pink paint.

If you are interested in additional concrete work, entirely at your cost, that is not covered by the above situation or that is on private property (for example, the sidewalk up to a front door, a driveway, or a approach to driveway replace driveover curb, gutter and sidewalk), please contact Vogel Concrete at 970-484-3880 or any other concrete contractor, for a cost estimate and Please schedule. make these arrangements as soon as possible so the contractor can coordinate their schedule within the City's repair If you have any questions work. about this program or plan to have additional concrete work completed, please call Kathleen Maddux at 970-221-6615.

Please trim private trees and shrubs prior to construction to avoid damage during concrete repair and asphalt paving phases of the project. Per City Code, trees should be pruned so branches are no less than fourteen feet above the surface of any street and no less than eight feet above the surface of any public sidewalk. Shrubs should be trimmed back to the edge of the City right-of-way, typically located at the back of the sidewalk.

Videotaping Streets

One part of the Street Maintenance Program turns a lot of heads even before construction

begins – videotaping the streets. Why would anyone want a video tape of street pavement?

Videotaping is used for several reasons. First, each street typically requires a variety of repairs:

- Concrete Repair
- Crack Sealing
- Asphalt Patching
- Reconstruction of Large Areas
- Paving Fabric
- Sealcoat
- Asphalt Overlay

These repairs are mapped out on the street with pink paint before construction begins. When these paint marks are captured on videotape, they are a record of specific locations where work took place. If problems are encountered during or after the work, the video can be used to help determine the nature of the problem and the appropriate steps to correct it.

The other reason for the videotaping is to establish a record of the condition of the adjoining streets, lawns, landscaping and driveways. If damage occurs, the videotape helps us restore these areas to their original condition prior to the construction.

Videotaping streets also allows us to collect a great deal of valuable information without a timeconsuming mapping process or site revisit.

Life of a Street

Did you ever think about the "life" of a street? You may be surprised to learn that a street leads a very interesting life with distinct phases, much like your own.

Consider a street's youth, for example. When pavement is new, it

is very resilient, taking the bump and grind of garbage and delivery trucks, the squealing tires of the neighbor's teenager, and the seasonal abuse of rain, snow, heat and cold without showing much sign of wear.

With the passage of time, the effects of traffic and weather begin to show. Cracks begin to appear and the pavement starts to ravel around the edges. Here and there, parts of the street may even sag a bit. In spite of all that, the street is still in fairly good condition.

As still more time goes by, the street continues to lose its ability to "bounce back" from the effects of traffic and weather and, after years of adequate service, it reaches a point where it begins to deteriorate more rapidly. The existing cracks become wider and potholes begin to appear. Water from the rain and snow will seep through these cracks and holes, weakening the gravel base and soil beneath the asphalt. Soon, the weak and aging pavement will no longer be able to stand up to traffic and weather and the streets will fail.

Fortunately, there is an alternative. The City's annual Street Overlay and Sealcoat Project is designed to prolong the life of a street by applying preventative maintenance, such as an asphalt overlay, before the pavement reaches the final stage of its life — the period of rapid deterioration. An asphalt overlay is part facelift and part reincarnation. After the overlay, the street will look very much like it did when it was new, and will again be able to withstand the effects of traffic and weather. The very best part of all of this is that preventative maintenance saves taxpayers a bundle of money.

Please visit our website for the most up-to-date information, plus you can join our email list at fcgov.com/streets.

Please Read the "No Parking" Signs

Parking No signs are posted at 24 least hours in advance of actual the parking restriction,

but in some cases they may be placed as

many as two or three days in advance. It is very important to read the entire sign carefully to identify the dates when the No Parking restriction actually applies, such as "Monday, June 8." No Parking signs will also state the nature of the work like "concrete repair." When posted, parking restrictions are normally in effect from 7AM to 6PM, Monday through Friday. Generally speaking, work will not be allowed, and parking will not be restricted, outside these hours.

PLEASE READ AND OBEY THE PARKING RESTRICTIONS POSTED ON YOUR STREET.

Your cooperation in observing the No Parking signs is one of the big keys to the success of the whole street repair project. Thank you!
