

PRODUCT CONTENT LABEL (2014)

Fort Collins Utilities' Green Energy Program

Green Energy costs an additional 2.4 cents per kWh, plus PILOTS¹. Green Energy is sold in blocks of 208 kWh, 417 kWh or 100% of electricity usage for residential customers; and in blocks of 1,042 kWh or 100% of electricity usage for non-residential customers. Customers are asked to sign a twelve-month agreement when signing up. The program requires a 30-day termination process. The product consists of the following new renewable resources averaged annually.

ENERGY RESOURCES ²	POWER MIX		GENERATION LOCATION
	ACTUAL ³	PROJECTED ⁴	
Wind	17%	14%	Medicine Bow Energy - WY
Wind	32%	38%	Silver Sage Energy - WY
Wind REC's	51%	48%	Colorado ⁵ and Oklahoma
TOTAL	100%	100%	

With the purchase of renewable energy certificates (RECs), you are buying the renewable attributes (i.e. environmental benefits) of a specific amount and type of renewable energy generation. The purchase of RECs helps offset conventional electricity generation in the region where the renewable generator is located. The purchase also helps build a market for renewable electricity and may have other local and global environmental benefits, including reducing global emissions and regional air pollution. Fort Collins Utilities' Green Energy Program is certified by Green-e[®] Energy, which annually verifies Fort Collins' purchase and use of these RECs toward the program. For more information, visit green-e.org.

The average home in the United States uses 900 kWh per month.

¹ PILOT: payment in lieu of taxes. With PILOTs Green Energy costs 2.544 cents per kWh.

² Eligible 2013 renewables are generation facilities in operation on or after January 1, 1999. Eligible 2014 renewables are generation facilities in operation on or after January 1, 2000. Green-e Energy also has agreed to certify the renewable energy supply from the Medicine Bow Wind Project, which includes some turbines that began operation in 1998 and 1999.

³ These figures reflect the power that we have contracted to provide in 2013. Actual figures may vary according to resource availability. We will annually report to you the actual resource mix of the electricity you purchased during the preceding year. The mix above represents the resource makeup of the renewable electricity you have purchased from Fort Collins Utilities. The remainder of your electricity, what you receive outside purchasing green energy, contained the following mix of electricity resources: coal (75%), hydro (18.7%), renewables (4.2%), natural gas (.8%) and other (1.3%). The 4.2% renewables includes the renewables called for by Fort Collins' Energy Policy.

⁴ These figures reflect the power that we expect to generate in 2014. Actual figures may vary according to resource availability. We will annually report to you the actual resource mix of the electricity you purchased during the preceding year. The mix above represents the resource makeup of the renewable electricity you may receive from Fort Collins Utilities. The remainder of your electricity, what you receive outside purchasing green energy, contains the following mix of electricity resources: coal (74.2%), Hydro (18.8%), renewables (4.2%), natural gas (.8%) and other (2%). The 4.2% renewables includes the renewables called for by Fort Collins' Energy Policy.

⁵ Colorado REC's contract expired in 2013.

For specific information about this electricity product, contact Fort Collins Utilities at (970) 221-6700 or fcgov.com/greenenergy.

Green-e[®] Energy certifies that Fort Collins Utilities' Green Energy Program meets the environmental and consumer protection standards established by the non-profit Center for Resource Solutions. For more information on Green-e[®] Energy certification, go to green-e.org.
