Re: City of Fort Collins General Employees' Retirement Plan - 2017 Actuary's Report

Dear Retirement Committee Members:

As requested, we performed an actuarial valuation of the City of Fort Collins General Employees' Retirement Plan as of January 1, 2017, for the plan year ending December 31, 2017. Our findings are set forth in this actuary's report. This report reflects the benefit provisions in effect as of January 1, 2017.

In preparing this report, we relied, without audit, on information (some oral and some in writing) supplied by City staff. This information includes, but is not limited to, plan provisions, participant census data, and financial information. We found this information to be reasonably consistent and comparable with information used for other purposes. The valuation results depend on the integrity of this information. If any of this information is inaccurate or incomplete our results may be different and our calculations may need to be revised.

All costs, liabilities, rates of interest, and other factors for the Plan have been determined on the basis of actuarial assumptions and methods which are individually reasonable (taking into account the experience of the Plan and reasonable expectations); and which, in combination, offer our best estimate of anticipated experience affecting the Plan. Further, in our opinion, each actuarial assumption used is reasonably related to the experience of the Plan and to reasonable expectations which, in combination, represent our best estimate of anticipated experience under the Plan.

This valuation report is only an estimate of the Plan's financial condition as of a single date. It can neither predict the Plan's future condition nor guarantee future financial soundness. Actuarial valuations do not affect the ultimate cost of Plan benefits, only the timing of Plan contributions. While the valuation is based on an array of individually reasonable assumptions, other assumption sets may also be reasonable and valuation results based on those assumptions would be different. No one set of assumptions is uniquely correct. Determining results using alternative assumptions is outside the scope of our engagement.

Future actuarial measurements may differ significantly from the current measurements presented in this report due to such factors as the following: plan experience differing from that anticipated by the economic or demographic assumptions; changes in economic or demographic assumptions; increases or decreases expected as part of the natural operation of the methodology used for these measurements (such as the end of an amortization period or additional cost or contribution requirements based on the Plan's funded status); and changes in plan provisions or applicable law. Due to the limited scope of our assignment, we did not

perform an analysis of the potential range of future measurements. The Retirement Committee has the final decision regarding the appropriateness of the assumptions and adopted them at their February 2017 meeting.

Actuarial computations presented in this report are for purposes of determining the recommended funding amounts for the Plan. The calculations in the enclosed report have been made on a basis consistent with our understanding of the Plan's funding requirements and goals. The calculations in this report have been made on a basis consistent with our understanding of the plan provisions described in Appendix B of this report. Determinations for purposes other than meeting these requirements may be significantly different from the results contained in this report. Accordingly, additional determinations may be needed for other purposes.

Milliman's work is prepared solely for the use and benefit of the City of Fort Collins General Employees' Retirement Plan ("Plan"). To the extent that Milliman's work is not subject to disclosure under applicable public records laws, Milliman's work may not be provided to third parties without Milliman's prior written consent. Milliman does not intend to benefit or create a legal duty to any third party recipient of its work product. Milliman's consent to release its work product to any third party may be conditioned on the third party signing a Release, subject to the following exception(s):

- (a) The Plan may provide a copy of Milliman's work, in its entirety, to the Plan's professional service advisors who are subject to a duty of confidentiality and who agree to not use Milliman's work for any purpose other than to benefit the System.
- (b) The Plan may provide a copy of Milliman's work, in its entirety, to other governmental entities, as required by law.

No third party recipient of Milliman's work product should rely upon Milliman's work product. Such recipients should engage qualified professionals for advice appropriate to their own specific needs.

The consultants who worked on this assignment are pension actuaries. Milliman's advice is not intended to be a substitute for qualified legal or accounting counsel.

The signing actuary is independent of the Plan Sponsor. We are not aware of any relationship that would impair the objectivity of our work.

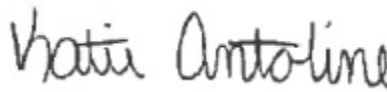

On the basis of the foregoing, we hereby certify that, to the best of our knowledge and belief, this report is complete and accurate and has been prepared in accordance with generally recognized and accepted actuarial principles and practices. We are members of the American Academy of Actuaries and meet the Qualification Standards to render the actuarial opinion contained herein.

We respectfully submit the following report, and we look forward to discussing it with you.

EXECUTIVE SUMMARY

This is a report of our actuarial valuation of the Plan as of January 1, 2017. A summary of our valuation results follows:

1. Overview of Results

The following table summarizes some of the key results of our valuation of the Plan, along with the comparable figures from the prior year valuation.

	January 1, 2017	January 1, 2016
Market Value of Assets (MV)	\$ 43,869,306	\$ 43,050,288
Return on MV of Assets (Prior Year)	5.9%	-0.6%
Discount Rate for Liabilities	6.50%	6.50%
Present Value of Future Benefits	\$ 59,794,045	\$ 59,860,251
Present Value of Future Normal Costs	<u>1,416,278</u>	<u>1,945,262</u>
Actuarial Liability (AL)	\$ 58,377,767	\$ 57,914,989
Funded Ratio (MV / AL)	75.15%	74.33%
Unfunded Actuarial Liability (AL - MV)	\$ 14,508,461	\$ 14,864,701
GASB 67/68 Disclosure Information	December 31, 2016	December 31, 2015
Discount Rate for Liabilities	6.50%	6.50%
Total Pension Liability (TPL)	\$ 58,377,767	\$ 57,914,989
Fiduciary Net Position (FNP)	\$ 43,869,306	\$ 43,050,288
Net Pension Liability (NPL)	\$ 14,508,461	\$ 14,864,701
FNP as a % of TPL	75.15%	74.33%

2. Analyze recent plan experience and select appropriate actuarial assumptions.

To value the Plan, the actuary must predict future events such as investment return, mortality, and rates of termination and retirement by means of “actuarial assumptions.” The validity of our valuation depends on how closely future Plan experience follows assumption. Experience different from that assumed gives rise to actuarial gains or losses, which affect future costs.

The actuarial assumptions used in this valuation are stated in Appendix A. The following comments address some of the more important assumptions.

a. Rate of investment return

One of the most important assumptions in an actuarial valuation is the investment return assumption, which represents the expected long-term rate of return on plan assets.

Actuarial Standard of Practice (ASOP) No. 27, *Selection of Economic Assumptions for Measuring Pension Obligations*, provides guidance to actuaries on selecting assumptions for measuring obligations under defined benefit pension plans. Because no one knows what the future holds, the best an actuary can do is to use professional judgment to estimate possible future economic outcomes. These estimates are based on a mixture of past experience, future expectations, and professional judgment. The actuary should consider a number of factors, including the purpose and nature of the measurement, and appropriate recent and long-term historical economic data. However, the standard explicitly advises the actuary not to give undue weight to recent experience.

Recognizing that there is not one “right answer”, the standard lays out a general selection process, and then calls for the actuary to select a reasonable assumption. Each economic assumption should individually satisfy this standard. Furthermore, with respect to any particular valuation, each economic assumption should be consistent with every other economic assumption over the measurement period.

Milliman’s investment practice has developed a model of expected real returns for various asset classes based on their capital market assumptions. Utilizing this model at December 31, 2016, an inflation assumption of 2.5%, the Plan’s current asset allocation and a 20-year time horizon produces a geometric mean return of 5.96%.

b. *Withdrawal and retirement rates*

Withdrawal rates

The actual number of participants leaving employment during 2016 prior to retirement is zero, compared to one expected to terminate in 2016. Withdrawal experience has been adjusted for terminations that had reached retirement eligibility but not yet commenced, and is summarized in the following table for the last five years:

	2012	2013	2014	2015	2016	Total
Actual	1	1	0	1	0	3
Expected	1	1	1	1	1	5
A/E						60%

We are not recommending any changes at this time for withdrawal, but will continue to monitor this assumption in the future to determine whether any changes are warranted.

Retirement rates

16 active participants actually retired during 2016, compared to ten expected to retire in 2016. Retirement experience from the past five years, adjusted for terminations that had reached retirement eligibility but not yet commenced, is summarized in the following table:

	2012	2013	2014	2015	2016	Total
Actual	13	11	15	17	16	72
Expected	10	11	11	12	10	54
A/E						133%

We analyzed retirements over the last five plan years, as summarized in our annual assumption review document dated February 6, 2017, and presented at the February 9, 2017 Retirement Committee meeting. The Retirement Committee has adopted the following change in the retirement assumption at January 1, 2017.

Age	Old Assumption	New Assumption
55-60	2%	5%
61	2	10
62-64	10	10
65	40	65
66	40	40
67-68	30	40
69 & Over	100	100

c. *Salary increase assumption*

The assumed rate of future salary increases used for the valuation of the Plan is a graded table based on age, as shown in Appendix A, which anticipated average salary increases during 2016 of 3.9%. Average salary increases for those participants continuing in covered employment was 2.5%, and the median salary increase was also 2.5%, based on a comparison of actual compensation rates for 2016 and 2017. Although the actual increases for the last few years have been lower than expected, we do not recommend a change at this time, as current economic conditions including inflation and real-wage growth lower than the long-term assumption of 3.5% may have influenced the short-term results. Based on various sources of long-term future expectations we believe the current inflation assumption of 2.5% and real-wage growth assumption of 1.0% remain reasonable. We will continue to monitor this experience.

d. *Form of payment assumption*

Prior valuations assumed that 30% of participants retiring from active status will elect a lump sum. Analysis of lump sum elections over the last five years produces the following.

	2012	2013	2014	2015	2016	Total
Lump sums	2	4	2	3	1	12
Total exits	13	11	15	17	16	72
% taking a lump sum						17%

As summarized in our annual assumption review document dated February 6, 2017, and presented at the February 9, 2017 Retirement Committee meeting, the Retirement Committee has adopted a change in the lump sum assumption at January 1, 2017 to 15% of participants retiring from active status will elect a lump sum.

The Retirement Committee reviewed and adopted the use of the assumptions for the January 1, 2017 actuarial valuation at their February 2017 meeting, as summarized in our annual assumption review document dated February 6, 2017.

3. Review the financial effect of experience gains and losses and changes in plan benefits.

Under the entry age normal cost method, an explicit actuarial liability is calculated, and is compared to the actuarial value of assets in order to determine the unfunded actuarial liability (UAL). Actuarial gains and losses on the unfunded actuarial liability can then be measured. The UAL is expected to increase by the normal cost and for interest due to the passage of time each year and is reduced by the amount of contributions made to the Plan. The following table summarizes the change in the UAL during 2016.

Actual UAL, January 1, 2016:	\$ 14,864,701
Expected changes during 2016:	<u>(369,056)</u>
Expected UAL, January 1, 2017:	\$ 14,495,645
Changes:	
Asset (gain) or loss	\$ 247,750
Salary changes different than assumed	(162,585)
Pensioner mortality	(105,224)
Retirement and other Terminations	(76,468)
Other demographic (gains)/losses	(111,110)
Change in Retirement Assumption	50,333
Change in Lump Sum Election Assumption	<u>170,120</u>
Total	\$ 12,816
Actual UAL, January 1, 2017:	\$ 14,508,461

4. Funding Analysis

The City’s current funding policy is to contribute 10.5% of compensation for active plan participants, plus a supplemental contribution necessary for the Plan to remain solvent. The supplemental contribution is currently budgeted at \$1.12 million per year.

The following chart compares the obligations of the Plan to the resources available to pay those obligations. The obligations of the Plan are equal to the present value of all benefits projected to be accrued for all current participants through their anticipated termination date. This includes the present value of benefits attributable to service already completed as of the valuation date (“Current”), also known as the Actuarial Liability, as well as the amounts attributable to projected future service for current active participants (“Future”). The resources of the Plan include the value of the assets set aside to pay for the benefits (“Current”), plus the present value of the future expected contributions for participants in the Plan as of the valuation date (“Future”) equal to 10.5% of projected future compensation plus the supplemental contribution of \$1.12 million per year.

The present value of future benefits is \$59.8 million, versus the current market value of assets of \$43.9 million and the present value of future payroll contributions of \$2.6 million. The shortfall of approximately \$13.3 million is anticipated to be funded through the supplemental contribution. This represents approximately 22 years of the \$1.12 million supplemental contribution as of the actuarial valuation date.

If all future experience follows assumptions, there are no changes to assumptions, plan provisions or funding policy, and the policy contributions (including the supplemental contribution) are made each year, the Plan’s funded status should improve. In addition, the declining active participant population should result in declining contributions as the compensation base declines.

Highlights of the 2016 plan year

- There were 410 members reported on January 1, 2017, 78 of whom were active members who continue to accrue benefits under the Plan. The remaining 332 were inactive members retaining benefits under the Plan.
- The Plan assets returned 5.9% during the 2016 plan year on a market value basis. The average annual return over the last 23 years is 6.1%. The assumed return for the 2016 plan year was 6.5%.
- At the end of 2016, the market value of assets was \$43,869,306.
- As of January 1, 2017, the ratio of the market value of assets to the actuarial liability was 75.15%.

* Rates of return for 1999 and earlier as reported by the prior actuary and used without audit.

** Rates of return for 2013 and earlier are net of all expenses. Rate of return for 2014 and later are net of investment expenses only.

TABLE 4
ACTUARIAL BALANCE SHEET
AS OF JANUARY 1, 2017

The following table contains information on the actuarial balance sheet: the Plan's resources and requirements. The Plan requirements consist of the actuarial present value of projected plan benefits as of the valuation date. Plan resources consist of plan assets, projected future normal costs and the Plan's unfunded actuarial liability.

TABLE 6
FUNDING ANALYSIS

The current annual budgeted contribution is 10.5% of payroll, plus an additional supplemental contribution of \$1,120,000 per year while the Plan is underfunded. Annual costs of the Plan include the value of benefit accrual allocated to the current year (normal cost) plus a payment towards the Unfunded Actuarial Liability, and includes a provision for administrative expenses paid out of plan assets. The following table shows the development of the anticipated number of years of supplemental contribution necessary to pay off the UAL based on the current annual valuation, if all future experience follows assumptions, there are no changes to assumptions, plan provisions or funding policy, and the policy contributions (including the supplemental contribution) are made each year.

Annual Cost

1. Entry Age Normal Cost	\$ 313,286
2. Anticipated Administrative Expenses	<u>24,129</u>
3. Total Annual Cost: 1. + 2.	337,415
4. Total Payroll	\$ 5,255,224
5. Annual Cost as a Percentage of Payroll: 3. ÷ 4.	6.42%

Percent of Payroll Contribution

6. Percent of Payroll Contribution Rate	10.50%
7. Present Value of Future Salary	\$ 25,192,239
8. Present Value of Future Payroll Contributions: 6. x 7.	\$ 2,645,185
9. Present Value of Future Normal Costs	<u>1,416,278</u>
10. Present Value of Payroll Contributions in excess of Normal Cost, available to fund UAL: 8. - 9.	\$ 1,228,907

Unfunded Actuarial Liability (UAL)

11. UAL at January 1, 2017	\$ 14,508,461
12. Present Value of Payroll Contributions in excess of Normal Cost, available to fund UAL: Line 10. above	<u>1,228,907</u>
13. Net UAL to be funded by Supplemental Contributions: 11. - 12.	\$ 13,279,554

Supplemental Contribution

14. Budgeted Annual Supplemental Contribution	\$ 1,120,000
15. Anticipated Annual Administrative Expenses	<u>24,129</u>
16. Net Annual Supplemental Contribution to fund UAL: 14. - 15.	\$ 1,095,871

Number of Years of Supplemental Contribution (as a Flat Dollar Amount) Necessary to Fund UAL 22

TABLE 8
TWENTY-YEAR PROJECTION OF BENEFIT PAYMENTS

The following table provides a projection of benefit payments over the next twenty years. This can be useful for the investment manager in planning future liquidity requirements.

Plan Year	Estimated Annual Benefit Payments
2017	4,201,000
2018	4,212,000
2019	4,505,000
2020	4,558,000
2021	4,798,000
2022	4,861,000
2023	5,042,000
2024	4,960,000
2025	5,020,000
2026	4,945,000
2027	5,000,000
2028	4,891,000
2029	4,834,000
2030	4,664,000
2031	4,584,000
2032	4,497,000
2033	4,326,000
2034	4,125,000
2035	3,935,000
2036	3,792,000

APPENDIX A ACTUARIAL PROCEDURES AND ASSUMPTIONS

The actuarial assumptions used in the valuation are intended to estimate future experience affecting projected benefit flow and investment earnings. Any variations in future experience from that expected from these assumptions will result in corresponding changes in the estimated costs of the plan's benefits.

The tables in this section give rates of decrement, referred to in actuarial notation by the general symbol "q'." The underlying theory is described more fully in Jordan, *Life Contingencies*, Society of Actuaries (Second Edition, 1967), page 277. Any age referred to in a table is always the age of the person at his or her nearest birthday.

An annual assumption review was performed based on data through 2016, as documented in our annual assumption review document dated February 6, 2017. The assumptions used in this valuation are based on the recommendations from that report, as approved by the Retirement Committee at their February 9, 2017 meeting.

Actuarial Cost Method

The actuarial cost method we use to calculate the funding requirements of the Plan is called the *entry age normal cost method*.

Under this cost method, the actuarial present value of the projected benefits of each individual included in the valuation is allocated on a level basis over the earnings of the individual between entry age and assumed exit age. The portion of the actuarial present value of the projected benefits allocated to all service prior to the valuation date is called the Actuarial Liability. The portion of this actuarial present value of projected benefits allocated to a valuation year is called the Normal Cost.

Asset Valuation Method

The actuarial value of assets is equal to the market value.

Investment Earnings

6.50% per annum, compounded annually net of investment-related expenses.

The investment return assumption was selected based on the Plan's asset allocation and capital market assumptions from several sources, including published studies summarizing the expectations of various investment experts. This information was then used to develop forward looking long-term expected returns, producing a range of reasonable expectations according to industry experts. Based on the resulting range of potential assumptions, in our professional judgement the selected investment return assumption is reasonable and is not expected to have any significant bias.

COLA

None.

Wage Increase

3.50%

Earnings Progression

Annual salary increases are based on a table graded by age, as displayed below:

Age	Percentage Increase at Age			
	Inflation	Productivity	Merit	Total
40	2.5%	1.0%	1.0%	4.5%
45	2.5	1.0	0.8	4.3
50	2.5	1.0	0.7	4.2
55	2.5	1.0	0.5	4.0
60	2.5	1.0	0.2	3.7
65+	2.5	1.0	0.1	3.6

Retirement

The following table sets forth the probability of retirement according to age.

Age	Probability of Retirement
55-60	5%
61-64	10
65	65
66-68	40
69 & Over	100

Deferred Vested participants were assumed to retire at age 65.

Disablement

Graduated rates are used. See table below for sample rates.

Withdrawal Rates

Graduated rates are used. Sample rates are as follows:

Age at Termination	Withdrawal		Disability
	Male	Female	
35	8.58%	9.53%	0.19%
45	3.88	5.23	0.44
55	2.00	3.29	1.19
60	1.50	2.15	1.80

Mortality

Healthy Lives, Pre-retirement – RP-2000 Healthy Non-Annuitant Mortality Table projected generationally using Scale AA

Healthy Lives, Post-retirement – RP-2000 Healthy Annuitant Mortality Table projected generationally using Scale AA

Disabled Lives – RP-2000 Healthy Non-Annuitant and Annuitant Mortality Table set forward 3 years and projected generationally using Scale AA

This assumption includes a margin for future mortality improvement relative to recent plan experience.

Expenses

The average of the prior three year's expenses:

Year	Expenses
2016	\$ 30,745
2015	22,706
2014	18,935
Average	\$ 24,129

Marriage Rates

85% of all active and terminated participants not currently receiving benefits are assumed to be married. Male spouses are assumed to be three years older than their female spouses.

Future Credited Service

The Future Credited Service rate is equal to the member's Full Time Equivalent (FTE) rate as of December 31 preceding the current valuation year.

Form of Payment

15% of participants retiring from active service are assumed to elect a lump sum.

Changes in Actuarial Assumptions and Methods as of January 1, 2017

The retirement assumption was updated to better reflect anticipated plan experience, as summarized in our annual assumption review document dated February 6, 2017 and approved by the Retirement Committee at their February 9, 2017 meeting.

The form of payment assumption was updated to better reflect anticipated plan experience, as summarized in our annual assumption review document dated February 6, 2017 and approved by the Retirement Committee at their February 9, 2017 meeting.

APPENDIX B PLAN SUMMARY

All actuarial calculations are based upon our understanding of the provisions of City of Fort Collins General Employees' Retirement Plan, as adopted and in effect on January 1, 2017. This summary does not attempt to cover all of the detailed provisions.

Plan Year

The Plan Year is the 12-month period beginning January 1 and ending December 31.

Effective Date

The original effective date of the Plan is January 1, 1971. The Plan was most recently amended and restated effective January 1, 2016.

Eligible Employee Classification

All persons employed to fill a classified position defined by the city, excluding police officers and firefighters, shall become a member of the Plan on the later of the Effective Date of the Plan or Date of Hire.

The Plan was frozen to new entrants as of January 1, 1999.

Accrued Benefit

The Accrued Benefit for each Member is the Member's Normal Retirement Benefit calculated using Average Monthly Compensation and Credited Service as of the calculation date. In no event will a Member's Accrued Benefit be less than the Accrued Benefit earned as of June 30, 2003.

Average Monthly Compensation

A Member's Average Monthly Compensation, as of a given date, is the average of the highest 60 consecutive months of considered compensation during the last 120 months of Credited Service. In the event that a participant was employed on a part time basis during any portion of this period, the compensation will be converted to a full time equivalent for purposes of calculating the Average Monthly Compensation.

Compensation

Compensation is the gross compensation included as taxable income on Form W-2, excluding bonuses, compensatory time recorded as additional hours, overtime pay, workers' compensation accrued vacation pay, taxable fringe benefits, but including any amounts contributed by the City to a salary reduction agreement including Code Sections 125, 132(f)(4), 402(a)(8), 403(b), 402(a), and 457.

Credited Service

A Year of Service is credited for each plan year a member works 2,080 hours. If the member works less than 2,080 hours, a partial Year of Service will be credited on a prorate basis based on the number of hours for which compensation is paid. Service is credited while a member is on long-term disability as long as no benefits are being paid from the Plan.

Vested Accrued Benefit

A Participant's Vested Accrued Benefit as of a given date is equal to the product of his Accrued Benefit multiplied by his Vested Percentage as of that same date.

Vesting Schedule

Members become vested in their Accrued Benefit according to the following schedule:

Years of Credited Service	Percent Vested
Less than 2	0%
2	40%
3	60%
4	80%
5 and over	100%

Normal Retirement Date

A Participant's Normal Retirement Age is the first of the month coincident with or next following the attainment of age 65.

Normal Retirement Benefits

Each Member who becomes eligible for a Normal Retirement Benefit under the Plan will be entitled to receive a monthly retirement pension benefit beginning at the Member's Normal Retirement Date and payable in the Normal Benefit Form equal to:

- 1.5% of Average Monthly Compensation, multiplied by Credited Service.

Normal Benefit Form

Life Annuity - Monthly pension benefit payable for the lifetime of the Member.

Early Retirement

(a) Early Retirement Date

A Member's Early Retirement Date is the first day of the month so elected by the Member which coincides with or next follows the date upon which the Member attains age 55 and completes 2 Years of Service.

(b) Early Retirement Benefit

A Member's Early Retirement Benefit is a monthly pension benefit equal to his Accrued Benefit determined as of his Early Retirement Date, reduced by 1/15th for the first 5 years and 1/30th for each of the next 5 years payments commence prior to age 65.

Optional Benefit Forms

Optional Benefit Forms are available and equal to the Actuarial Equivalent of the Normal Benefit Form and may be in an amount more than or less than that provided by the Normal Benefit Form depending on the option selected. Such distribution may be as a Joint & 50% or 100% Survivor Annuity, a Life Annuity with 120 payments guaranteed, or a Lump Sum.

Pre-Retirement Death Benefit

If a Member dies prior to commencing pension payments, the Member's beneficiary will receive a single sum benefit in an amount equal to 47% of the actuarial equivalent value of the Member's Accrued Benefit. If the beneficiary is the Member's spouse, the spouse may elect a monthly benefit which is the actuarial equivalent of the single sum benefit. (The 47% factor is stated in the Plan Document Article XI, Section 11. It was developed assuming that the participant quit the day prior to death and elected a 50% joint and survivor benefit.)

Termination Benefit

In the event of the termination of a Member's employment for any reason other than death, disability or retirement after completing 2 Years of Service, the Member will become entitled to receive a monthly pension benefit commencing on his Normal Retirement Date equal to his Vested Accrued Benefit.

If the deferred benefit to which the Member is to be paid at his Normal Retirement Date has an actuarial equivalent value less than \$5,000, the entire benefit will be paid to the terminated participant as a single lump sum.

Disability Benefit

(a) Total Disability

The monthly benefit, payable for life commencing at normal retirement date, is equal to the normal retirement benefit considering annual rate of compensation at disability and credited service he would have accumulated if employment had continued uninterrupted to his normal retirement date.

(b) Permanent Partial Disability

A member may accrue Credited Service under the Plan for any period of time up to a maximum accrual of two (2) years.

Instead of the disability benefit described above, the disabled participant may elect to take a lump-sum distribution at any time.

City Contributions

The entire cost of the Plan is to be paid by the City.

Plan Changes

None

APPENDIX C PARTICIPANT DATA

The actuarial valuation of the Plan is based on the participant data provided to us by the City. The data includes active participants, terminated vested participants who retain benefits under the Plan, and retirees and beneficiaries receiving benefits as of January 1, 2017. A total of 410 participants were reported to us and included in this valuation. Table 1 includes a reconciliation of the participant data from January 1, 2016 to January 1, 2017.

The age and service characteristics of the 78 active participants in the Plan as of January 1, 2017 are shown in Table 2. As indicated in Table 2, the average age of the active participants on the valuation date was 59.3, the same as the average age of 59.3 of the active participants on January 1, 2016. The average years of service of the active participants on January 1, 2017 was 26.5, up from the 25.9 average years of service of the active participants on January 1, 2016.

In addition to the active members, there were 94 inactive participants not yet in pay status retaining benefits under the Plan. Table 3 contains a summary of the number of inactive participants not yet in pay status but retaining benefits under the Plan, and the amounts of those benefits.

Tables 4 and 5 summarize the information provided on the 238 members and beneficiaries who are currently receiving monthly benefits. Table 4 contains a summary of the number of participants receiving benefits and the amounts of those benefits, while Table 5 lists the benefits being paid as of January 1 of each year from 1986 to 2016. Counts and total annual benefit amounts are separated by status and sex.

Table 6 displays the list of the retirement dates and status of participants eligible for normal or delayed retirement in the next five years.

Because participation in the Plan was frozen as of January 1, 1999, the number of participants in the Plan has declined over the years, as illustrated below:

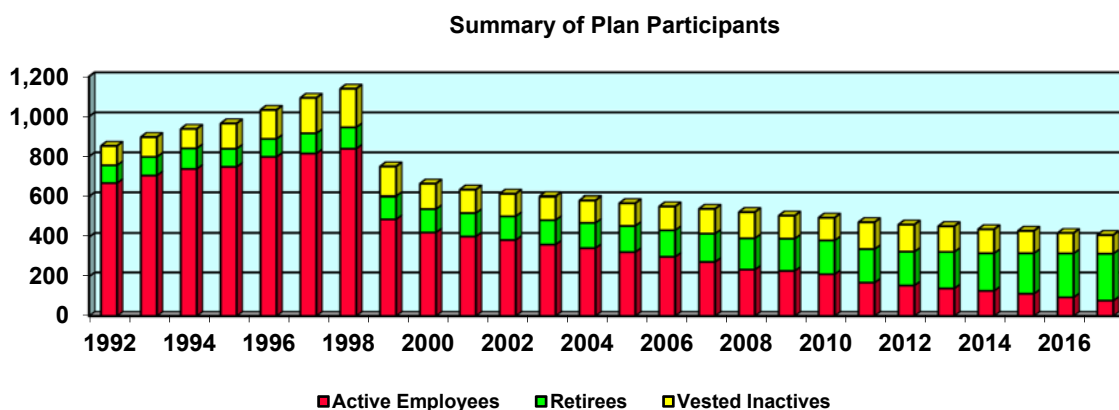

TABLE C-1
