Birds Love These Bushes

Overgrown gardens like this one are a great place to visit and find birds. Some birds are common residents, others hang out here part-time, and some that fly in only once a year to nest on their long migration.

Lead hummingbird
These little garden visitors feed on 80 colors of light.

Western gnatcatcher
Watch for a flash of yellow in the face and the orange and black wing pattern.

The blue-gray gnatcatcher
An unusual summer visitor - look for a light yellow throat.

Wood thrush
The adult male has a long tail. It is a long breeding migration. It has a long tail. It has a long tail. It has a long tail.

Wood thrush

On the Edge

The edge of a forest where two types of habitat meet. These edges contain the best of both worlds. Many birds and mammals like to hunt and feed here. Many species that don't nest here but do visit to feed on the edge.

Many species that don't nest here but do visit to feed on the edge.

Also available in this area from April to July after the migration which has been shown on the map of the park. Many, many species are still in the area.

Some birds that visit and nest here are:

Take Care...

As you enjoy this wild place, explore with care and be aware.

Cherish your land!
Tread lightly—staying on the trails leaves wild spaces for wildlife. Take out the trash, yours and others, and leave everything in nature exactly as you find it.

Be wise in the wild!
Squirrels, mountain lions, and rattlesnakes live here. Respect them—and give them plenty of space.

Plan Ahead and Prepare!
Stay alert. Storms build quickly here. Lightning is dangerous and heavy rains can rapidly flood low-lying areas.

Remember to take sunscreen and plenty of water.

Don't climb the hotspots!
These fragile formations break easily and are home to many of this area's unique plants and animals.

Trails for November

This month we celebrate gratitude and thankfulness- are trails something you are thankful for?

November is a great time to visit [Sagestone Prairie Natural Area](#), known for its vast grasslands and wide open views. At this remote site you can get a sense for the shortgrass prairie, soundscape, and vistas that settlers might have experienced. There are over 40 miles of trails for hiking, biking or horseback riding. Sagestone closes in December, January and February, so its a great time to make one last visit for 2014! This is the place where endangered black-footed ferrets were reintroduced this year. Wildlife cameras have captured the [first photo of Sagestone's ferret](#). Thank you CSU Wildlife Society volunteers who monitor the motion-triggered cameras!

Looking for somewhere closer to home to explore? Visit [Running Deer Natural Area's](#) fire cab- it was once on top of White Pine Mountain, 26 miles west of Fort Collins. Years ago, the U.S. Forest Service relied on people (not airplanes or satellite images) to spot forest fires. Trail people stationed on remote mountaintops were paid to watch for fires- every day, all summer long. The fire cab (top), is now a nice destination and place to watch for wildlife. Start at the Welcome Center parking lot and head west about 1 mile on the flat trail.

Dam-free Anniversary

A year ago, a stretch of the Poudre River became dam-free when the abandoned Footh Asens diversion structure at [North Shields Park Natural Area](#) was removed. It was replaced with a series of riffles (small rapids). The project was an exciting partnership between the City of Fort Collins Natural Areas Department and the Colorado Water Trust to improve fish passage, connect the river to its floodplain, improve river-based recreation, and reduce downstream

NATURALIST'S NICHE

MEET THE CLASS OF 2010!

This spring a new group of Master Naturalists and Master Naturalist Assistants (MNAs) joined our program. The MNAs serve as important aids to Master Naturalists assisting with group management, equipment, and activities.

Master Naturalists provide educational programs on the natural areas to groups including schools, clubs and scouts. Often groups are large, the settings take place in remote areas, or the activities are complex, and Master Naturalists need a helping hand. MNAs provide just this assistance. They can take an active role in the education program without the time commitment or specialized training required of Master Naturalists. It's also a great way to gain experience in interpretation, natural history, and

Class of 2010 pose at Johnson Shale.

SAVE THE DATE!

ANNUAL VOLUNTEER APPRECIATION PICNIC IS SCHEDULED FOR AUGUST 7th!

Our Annual Volunteer Appreciation Picnic is scheduled for Saturday, August 28, 10 a.m. – 2 p.m. at beautiful Gateway Natural Area. We are planning an old-fashioned celebration with a barbecue, baking contest, sack races, fishing, prizes, hiking, and more. Watch your email boxes for more information and registration details in July. You and your family won't want to miss out!
