

## Twin Silo Park II By Jill MacKay/ 2018

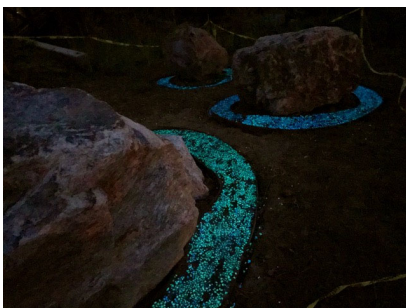

Local artist Jill MacKay's first mosaic on this site is *Wave Walk*. It highlights the creek play area and is located in the sidewalk at either end of the bridge. It utilizes photo-luminescent stones, which glow at nighttime and take advantage of the darker natural surroundings of the creek.

Jill MacKay worked with the Fort Collins Utilities Project Team to expand this art project. For this phase, the

placement of a grouping of boulders near the bridge and the creek extend the *Wave Walk* project. Mirror mosaic on the surface of the boulders reflect the blue sky and clouds, which are the source of rain and snow (where most ground water begins). At the base of the boulders, photo-luminescent stones are embedded in cement in flows moving toward the creek.

These elements intend to both speak of where the water comes from, and how it moves and is moved (engineered in parks). This is intended to offer an open invitation to discuss and educate about the topic of ground water and the message the City would like to share with its residents.
