Right Angle Crashes by Type and Location (2013 – 2017)

As shown, almost two-thirds (64%) of right angle crashes occur where someone stops but then proceeds into oncoming traffic (shades of blue in the chart). Most of the remaining crashes (34%) are the result of a motorist running a red light or stop sign (shades of brown).

Fixed Object Crashes

Fixed object crashes are single vehicle crashes where a driver collides with a fixed roadway feature such as a curb or a median or runs off the road and hits a roadside feature such as a tree or utility pole.

Minor fixed object crashes often occur in inclement weather. The other main contributor to these types of crashes is alcohol. Seventeen percent (17%) of all fixed object crashes involve alcohol. For severe crashes the percentage related to alcohol goes up to almost 43%.

Number of Fixed Object Crashes

The chart below shows the historical trend of fixed object crashes in Fort Collins. These crashes have been tracking relatively consistent in the past five years.
Fixed Object Crashes by Type (2013 – 2017)

The figure below shows fixed object crashes by the type of object stuck.
