

## Locations of Crashes 2014-2018

The chart below shows the location of crashes in Fort Collins. Crashes at intersections or driveways account for 74% of all crashes. This illustrates the importance of reducing the number of driveways (when possible), minimizing accesses and focusing the traffic safety program at intersections.

More than **74%** of all crashes occur at an intersection or driveway

Crash location (2014–2018)

## At Fault Drivers by Age 2014-2018

The chart below compares the number of crashes, by age, of at-fault drivers with the percent of licensed drivers in that age category. Drivers aged 15–19 are three times as likely to be involved in a crash as would be expected given the number of licensed drivers in that age group. Twenty to 24 year-old drivers are also overrepresented in crashes. All other age groups are underrepresented in crashes.

Teenagers represent **5 %** of all drivers but are responsible for **15 %** of all crashes

While these statistics are not unique to Fort Collins, they do indicate that driver inexperience is likely a key factor in crashes and countermeasures to address this challenge are appropriate at all levels (local as well as statewide and national).
