

Irrigation Plan Guidelines

Directions: A plan of the project's irrigation system undergoing renovation is REQUIRED for ALL PROJECTS. Only the area affected by the project needs to be included.

The irrigation plan must be current and include the following information:

1. Property name, address, north arrow, and date map was created
2. Maps must be drawn to scale
3. Area of proposed project/renovation clearly indicated on the map
4. Location of the following, including clear description in the legend:
 - a. Irrigation controller(s) location(s) and model
 - b. Backflow size and location
 - c. Point of connection for specific tap(s) with meter/account number
5. For each irrigation zone affected by the project/renovation, indicate:
 - a. existing zone number on the controller
 - b. head type
 - c. valve location
 - d. planned reconfiguration
6. All trees in renovation area require irrigation. Identify how trees in renovation areas will be irrigated.

Please use bubbles, color, or other symbology to ensure each zone that is being adjusted or upgraded is *clearly* identified on the map.
