Flip the switch!

**Turn off the lights when you leave a room or anytime you aren't using them.**

Layer up!

On a cold day, stay warm by putting on a blanket or an extra layer instead of turning up the heat.

Let the sunshine in!

On sunny days, turn off the lights and let the sunshine pour in through the windows.

Refrigerators use a lot of energy!

Make sure you close the door as soon as you are done so you don't waste energy.

Wash up and save!

When you wash your hands, use cold water instead of warm. It takes energy to heat water up.

Close the door!

By closing the outside doors, you can help your home heat or cool each room better.

What else can YOU do to save energy?

Draw your own idea below!
