

Walnut Street Water & Sewer Rehabilitation Project Phase 2 - Pine Street Waterline

THE ISSUE

Water and sewer pipelines in Walnut Street between Mountain and College avenues over to Jefferson Street are some of the oldest in the city, dating back about 100 years. This 3-phase project will replace some of those lines and services, and address failing infrastructure that causes water quality concerns, low levels of fire protection and maintenance problems.

RECAP OF PHASE 1

Sewerline replacement in Walnut Street and Seckner Alley

Fort Collins Utilities abandoned the old clay sewer pipe and installed 306 lineal feet of new 8-inch sewerline in Walnut Street from Mountain Avenue to Seckner Alley.

The old 6-inch clay sewerline in Seckner Alley also was replaced with an 8-inch sewer using a trenchless technology known as 'pipe bursting.' Active sewer services were reconnected to the new main with no service disruptions to businesses. Inactive services were identified and abandoned.

WHAT TO EXPECT NEXT

Phase 3 begins in January and will continue through March 2018. Utilities will abandon two old water lines in Walnut Street and install 550 feet of new waterline from College Avenue to Linden Street.

PHASE 2 - PINE STREET WATERLINE

In Pine Street from Firehouse Alley to Walnut Street, Utilities' contractor, Connell Resources, will replace the existing 4-inch waterline with 400 feet of new 8-inch waterline.

Construction will begin Monday, Sept. 11, and last about four weeks. Closures and detours will be coordinated with the Brinkman project for efficiency and your convenience. Firehouse Alley at Pine Street will be closed periodically to all traffic. Drivers will not be able to turn north from Walnut Street onto Pine Street, but access to Pine Street from Jefferson Street will remain open. Fences, barricades and traffic control will be in place for pedestrian, vehicle and worker safety.
