

#### D. Reporting templates

Based on the need to now report data not only for FC citywide but also separately for each of the four zones (NW, NE, SE, SW; broken down using College and Drake) the city has been divided into for the purpose of WNV surveillance and mosquito control, CSU had to generate a new reporting template. This new reporting template is tailored to provide data relevant to the Level III and IV entomological triggers (see below) for control measures in the “City of Fort Collins Program Response Guidelines to Mosquito Borne Arboviral Activity (March 2013 edition)”.

#### Level III

- Vector index > 0.75 and increasing
- Mosquito infection rates of > 3.0 per thousand (0.3%) and increasing

#### Level IV

- Vector index > 0.75.
- Sustained mosquito infection rates of > 5.0 per thousand (0.5%)

**The new reporting format comprises a set of 6 tables to address the current week (1a, 2a, 3a) and to provide seasonal and historical context (1b, 2b, 3b) (see full table formats on following pages)**

- Table 1a. Vector Index for current week
- Table 1b. Vector Index for All *Culex* by week from June-August
- Table 2a. Vector abundance for current week
- Table 2b. Vector abundance for All *Culex* by week from June-August
- Table 3a. WNV infection rate per 1,000 females for current week
- Table 3b. WNV infection rate per 1,000 females for All *Culex* by week from June-August

**Table 1a. Vector Index for current week**

Week: <b>34</b>	Mean abundance of females per trap night <sup>1</sup>		Estimate for proportion of females infected with WNV <sup>2</sup>		Vector Index

LV	9.94	17.39	0	0.0158	<b>0</b>	<b>0.275</b>	<b>0.275</b>

<sup>1</sup>From Table 2a (CDC light trap catches only).

<sup>2</sup>Derived from the data presented in Table 3a for estimated infection rate per 1,000 females (CDC light trap and gravid trap catches combined).

<sup>3</sup>Vector Index for *Cx. pipiens* = (Mean abundance of *Cx. pipiens* females per trap night) x (Estimate for proportion of all *Cx. pipiens* females infected with WNV).

<sup>4</sup>Vector Index for *Cx. tarsalis* = (Mean abundance of *Cx. tarsalis* females per trap night) x (Estimate for proportion of all *Cx. tarsalis* females infected with WNV).

<sup>5</sup>Vector Index for All *Culex* = (Vector Index for *Cx. pipiens*) + (Vector Index for *Cx. tarsalis*).
